# The Nankang Story

## 50 Years of Industrious Work, all Dedicated to Motoring Safety

Nankang is proud of our quality products produced over the years. Yet we never cease to pursue further excellence in both our R&D and manufacturing processes.

Nankang Rubber Tire's heritage runs deep; having the longest history amongst the tyre manufacturers in Taiwan. For 50 years, guided by our corporate motto, "Integrity, Pragmatism, and Innovation", we have persisted in creating performance and growth. In response to increasingly discerning market demands, we have strived aggressively towards our goals of "product innovation with R&D, differentiation from competition, product quality upgrading, customer satisfaction, after-sale service and professional management", in order to offer more and more innovative products.

## 50 Years of Honour and Recognition, Winning Numerous Awards with our Effort in R&D

Over the past 50 years, our continuous efforts in keeping up with the advancement of technology and product quality control have proven to be fruitful not only in developing many innovative and durable products, but also bringing us numerous global awards in Quality Assurance.

## 50 Years of Business Splendor, High Time to Turn a New Page

Nankang Rubber Tire's corporate logo has been in use for more than 50 years. Facing increasingly fierce competition from the global tyre industry and considering the trend of corporate reforms, in 2010 Nankang embarked upon a review of its corporate identity system "CIS". Through this new project, we aim to build a new Nankang Tire brand image, of world standard. Being able to keep up with the times, the company will proudly move on to the next splendid century of its corporate history.

## Mastering the Colourful World Stage with a New CIS

Firmly established in Taiwan for 50 years under the guidance of her company motto of "integrity, pragmatism and innovation", Nankang Tire has never ceased to move ahead. Similarly, she commands the ambition to aggressively expand her business with global perspective.

A passionate yet steadfast symbol, the , represents Nankang Rubber Tire's sustainable business philosophy, and her corporate spirit. Care for the customer is always of paramount importance.

The CIS employs a duo colour combination of red and black.

The Red color expresses Nankang's corporate spirit of high passion, respect for customers, energy and vitality.

The Black color highlights the strength and stability of her tyre business and represents an image of generosity, grandeur, professionalism and trustworthiness.

Whether it be for cruising the highway, striding over an icescape, or conquering a dilapidated off-road track, for 50 years, Nankang Tire has offered drivers safe innovative motoring, with a spirit as unbreakable as the tyres she manufactures.

From her humble beginnings, Nankang has advanced across five continents, and covered more than 100 countries globally. From tyre industry leader in Taiwan, Nankang is now steadily driving her way onto the global stage with unlimited opportunity.

## A Smooth Ride All Over the World

It is Nankang Tire's goal to have a smooth ride ("free your way") towards the world stage. For 50 years, the company has been continuously moving forward under her principles of "integrity, pragmatism, and innovation", allowing her to shine on the world stage. In the future, with extraordinary product quality, Nankang's products will certainly have a "smooth ride" in markets all over the world.

## Carefree Access

With their superior quality, Nankang tyres have been popularly sold worldwide. For Nankang, the driving experience and safety are paramount when it comes to its tyre products. Going forward with our ever-improving quality, we have even greater hopes of sharing the Nankang "free your way" spirit with many more motorists, right across the world.

# Our Commitment to the Environment

Nankang realizes the fact that we are a part of the Earth's Eco system, and so we take pride in our responsibility to provide a better environment for future generations. Our commitment is evident right throughout the manufacturing process. Our raw materials are formulated to lower pollution emissions. As such, our suppliers are required to provide raw materials which conform to all relevant internationally recognized environmental regulations.

## Conformity to Regulations with HA (High Aromatic)-Oil Free Formula for VOC Reduction

Nankang tire compounds are formulated to meet the European Union's regulations on environmental protection which came into force in 2010. HA-oil free compounds are used across the entire product line. In addition, necessary measures are taken to reduce volatile organic compound ("VOC") generation in our manufacturing, thus eliminating further pollution in the process.

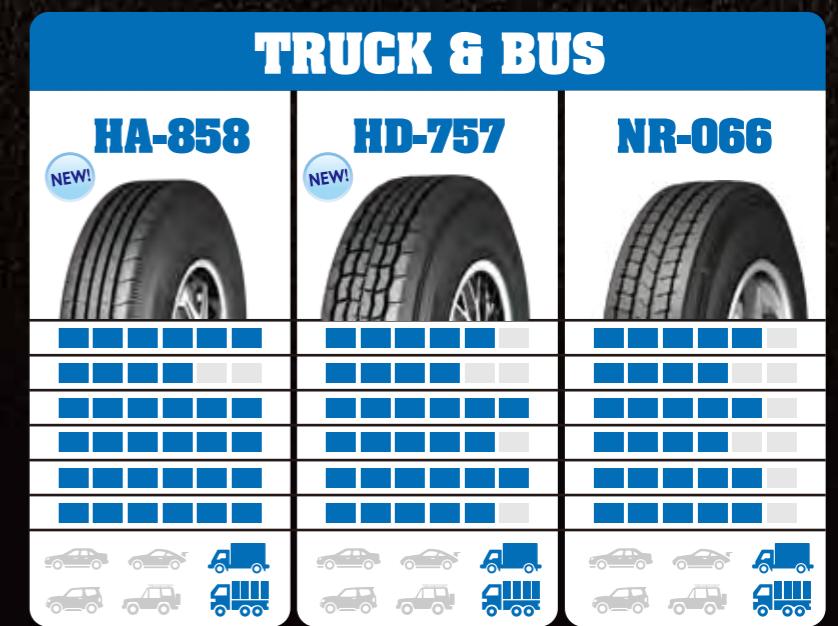

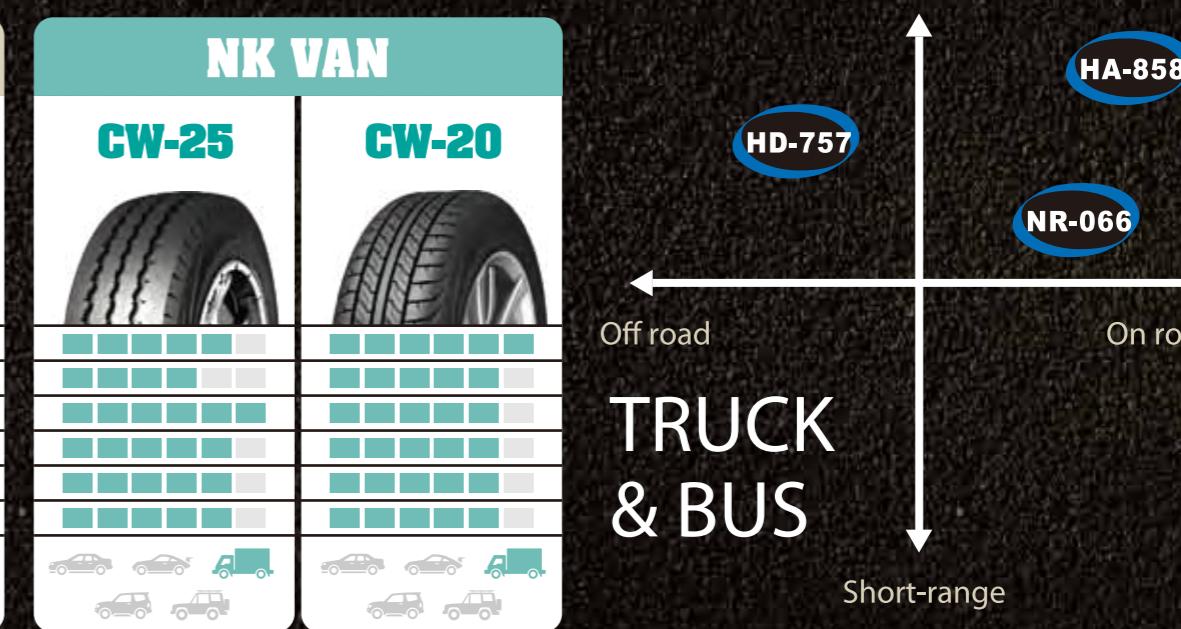

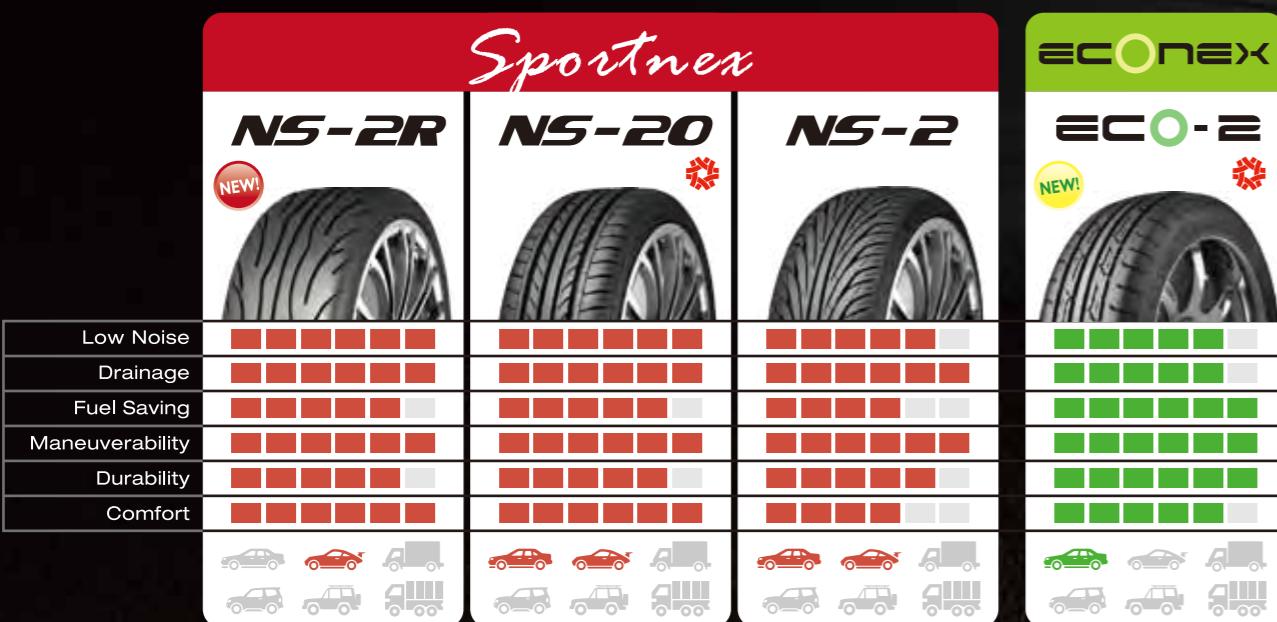

## Extended Tire Life for Better Value and a Better Environment

Extending the durability of tires not only creates higher economic value for drivers, but also reduces the impact of scrapped tires upon the environment. To achieve this, Nankang uses highly structured chemical agents to lessen tread wear, and unique additives designed to slow the tire aging process. High pressure-bearing materials are applied, to enable tires to be properly inflated. While value and safety are essential to customer satisfaction, product quality and performance are never compromised.

## Lower Rolling Resistance for Fuel Saving and Carbon Dioxide Emission

Fuel consumption and carbon dioxide emissions are direct functions of a tire's rolling resistance. Lowering rolling resistance is one of the top priorities for our product development. High dispersible silica and unique cross linking agents are applied in our formula to achieve the stable integration of natural, synthetic rubber and silica, which leads to the advanced result of lower rolling resistance, less heat generation and better grip performance.

# Product Line Up

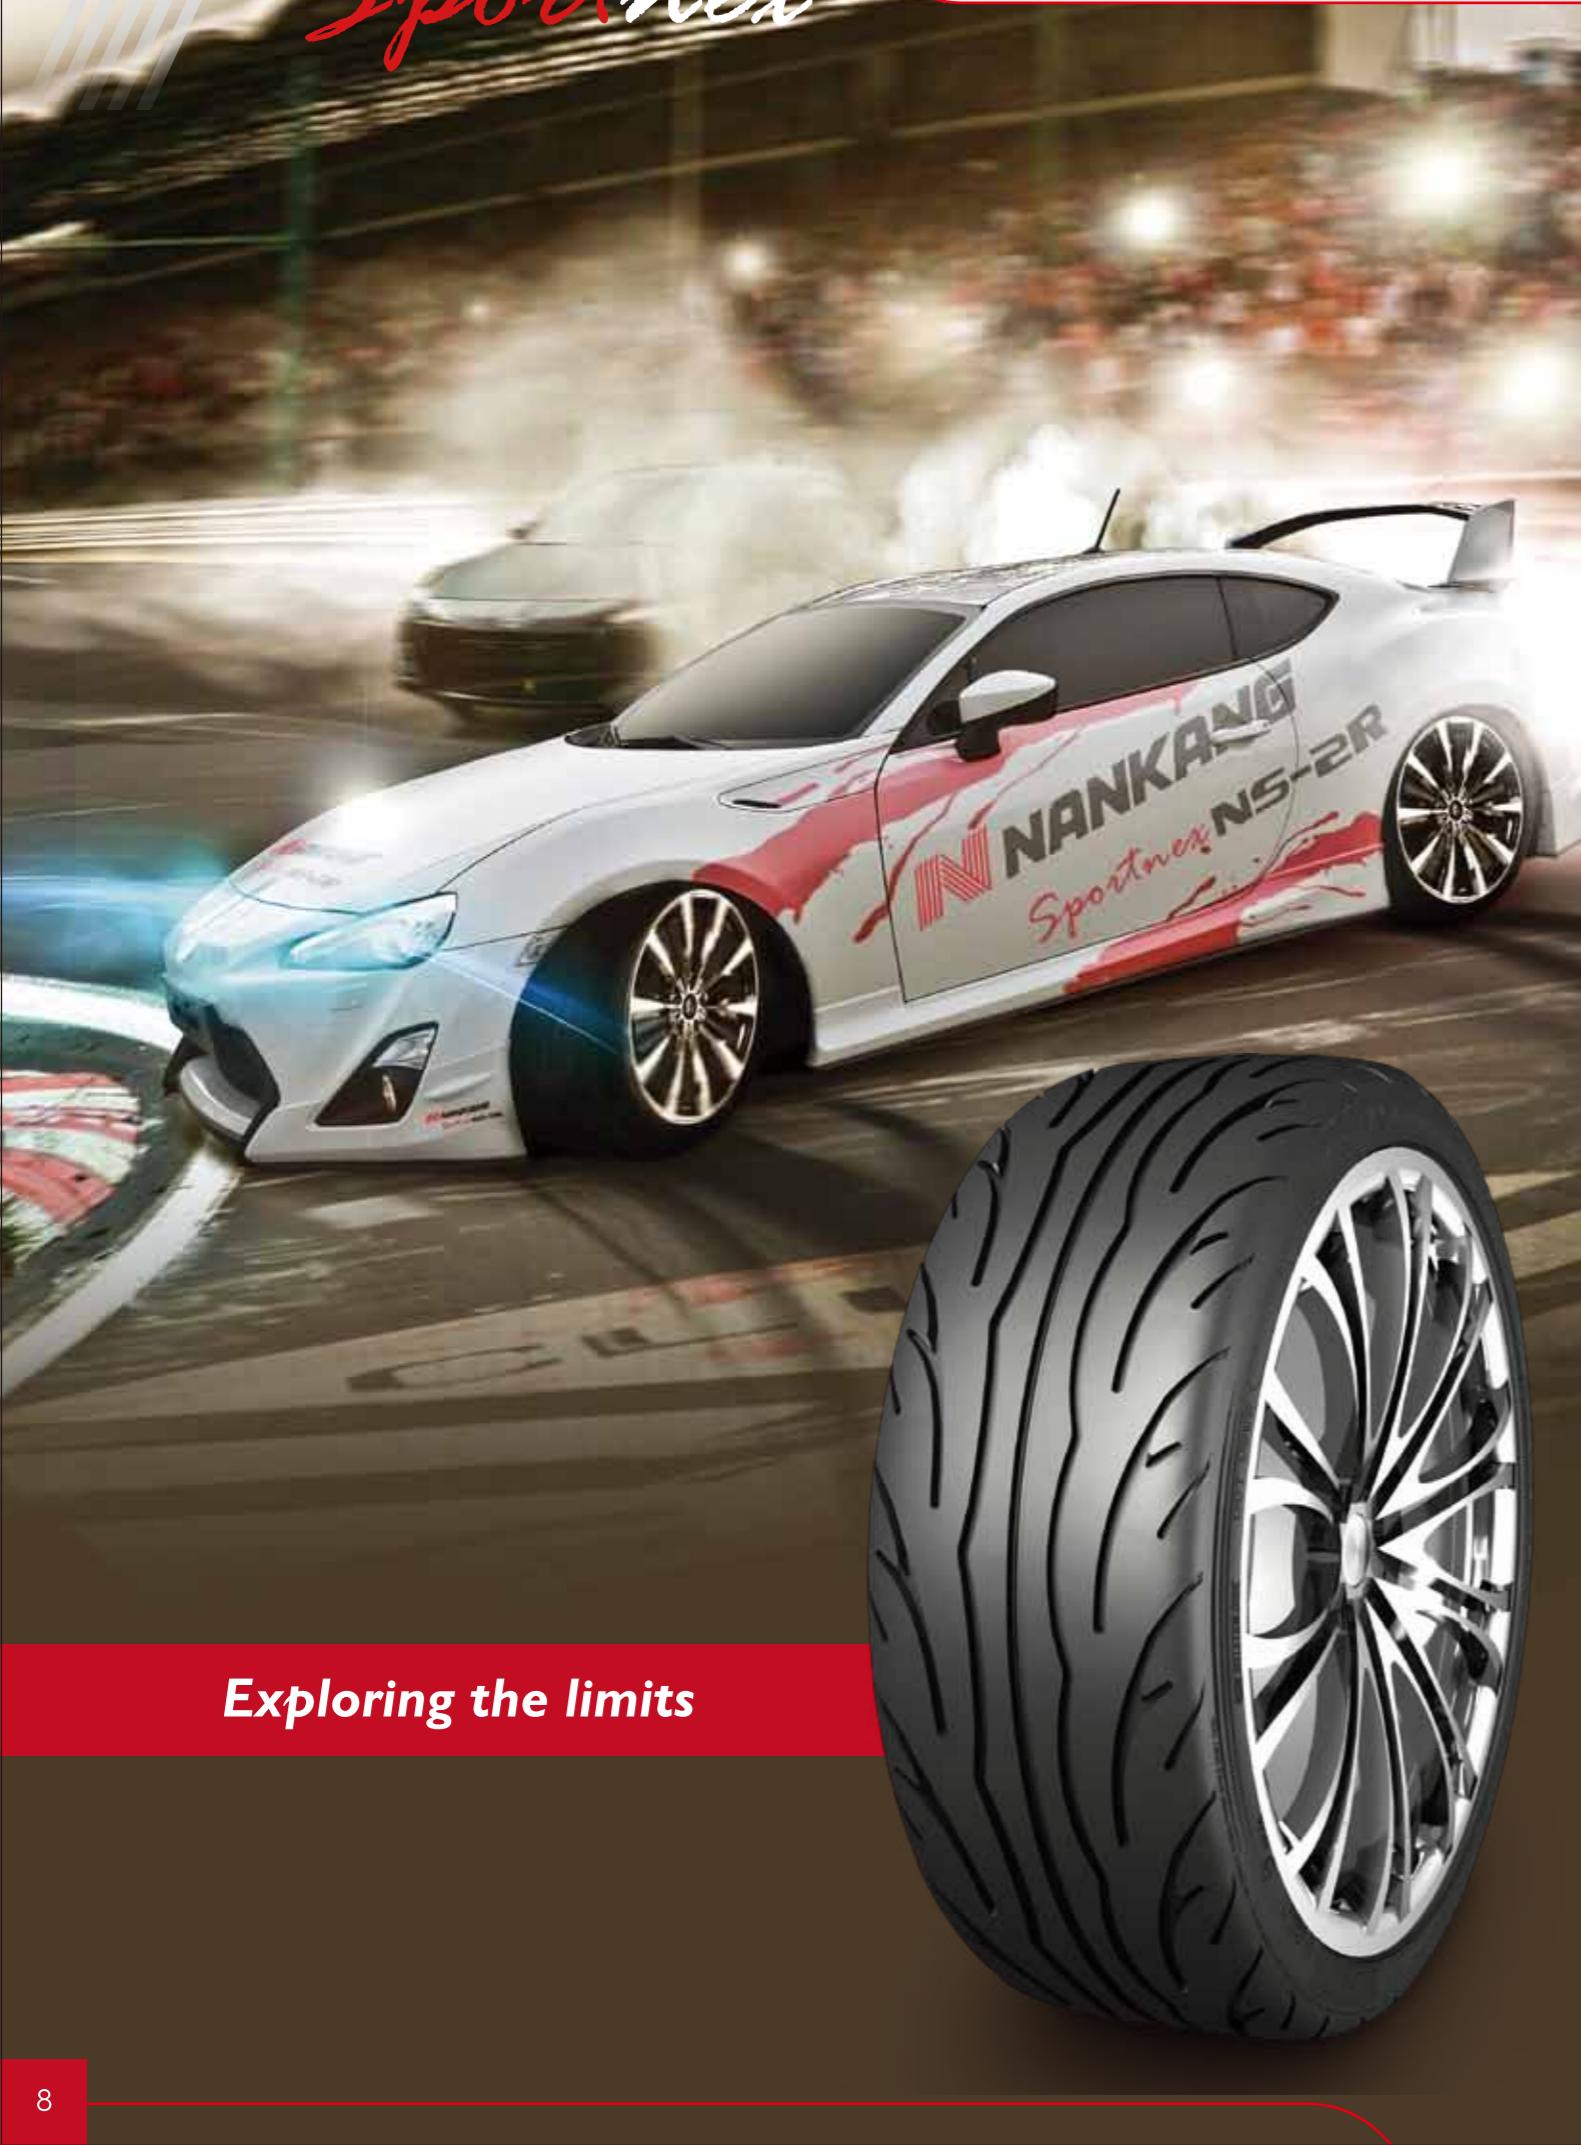

Sportnex

Sportnex

NANKANG

Exploring the limits

# NS-2R

The three main circumferential grooves on central tread can improve drainage efficiency and wet handling performance.

Unique groove wall angle prevents excessive stress massing to reduce irregular treadwear effectively.

Continuous tread shoulder design enhances tire stiffness and ensure cornering precision.

The optimized tread width has 13% wider contact patch than a regular tire, and increases stability while driving at high speed.

Large blocks on tread shoulder upgrade stiffness and handling performance.

#### Straight Wide Grooves:

4 straight wide grooves enhance tire drainage efficiency and maneuverability on wet road condition.

#### Sub-Straight Grooves:

The two sub straight grooves on tire shoulders not only assist the main grooves drainage efficiency, but reduce uneven tread wear.

#### Tiny Lateral Kerfs:

The kerfs can reduce pattern noise caused by tire rolling.

#### Sipes:

Sipes on tire shoulders reduce tire block rigidity, lower the noise from road, and increase comfort ability.

NANKANG design team creates NS-20 with 5 pitches computer simulation technology, and new pitch sequence proves to decrease noise at high speed.

#### Brand New Compound:

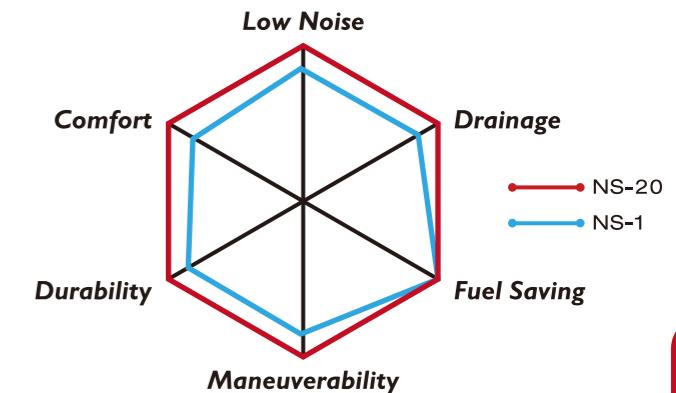

New silica compound makes NS-20 have excellent grip ability on both dry and wet road surface.

## Performance Comparison between NS-20 and NS-1

The new generation product line, NS-20, adopts brand new pattern design philosophy to curb noise effectively.

# NS-2

Two central circumferential grooves design can efficiently direct water away and enhance superior wet handling.

Computer simulated V-shaped drainage sub-grooves increase resistance to hydroplaning at high speed running through deep water.

Two-in-one pitches and variable width tread profile help to reduce pattern noise and provide a quieter comfort ride.

Shoulder edge sipes ensure even and prolonged tread wear.

### Dry Road Braking Test

### Wet Road Braking Test

### Fuel Efficiency Index (%)

Excellent dispersible silica and unique crosslinking agents reduces rolling resistance substantially as well as enhances wet grip.

The "Chain-End Modification" technology used in synthetic rubber strengthens fuel saving and traction.

HA-oil-free formula for all sizes conforms with EU environmental protection laws.

Central sub grooves with shallower depth enhance vertical/lateral block stiffness to avert block deformation and further reduce energy consumption.

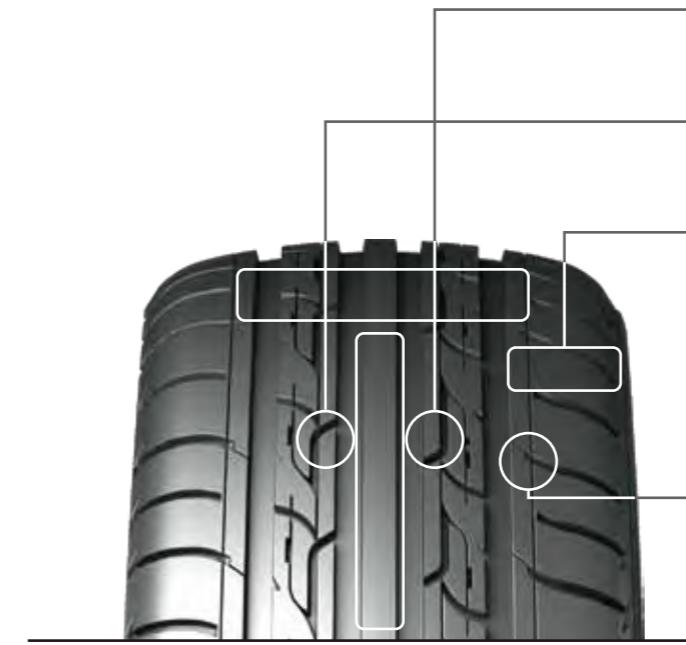

Shoulder groove bottom with big angle retains shoulder block continuity, weakens block wriggling, and reduces energy consumption.

Two section lateral grooves on shoulders profile prevent uneven tread wear and enhance traction.

Four circumferential grooves enhance drainage performance and safety on wet roads.

Central rib design reinforces straight driving and handling performance.

Circumferential rib design on tread shoulder, with thin sipes instead of run-through lateral grooves, prevents groove resonance.

COMFORT

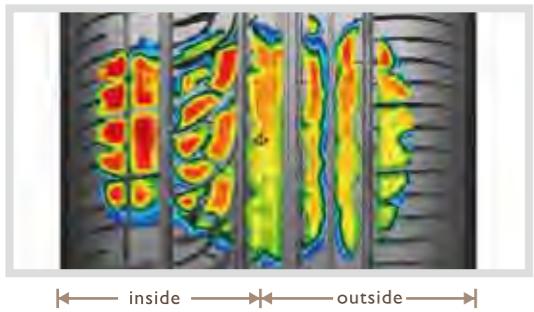

NK COMFORT

## AS-1

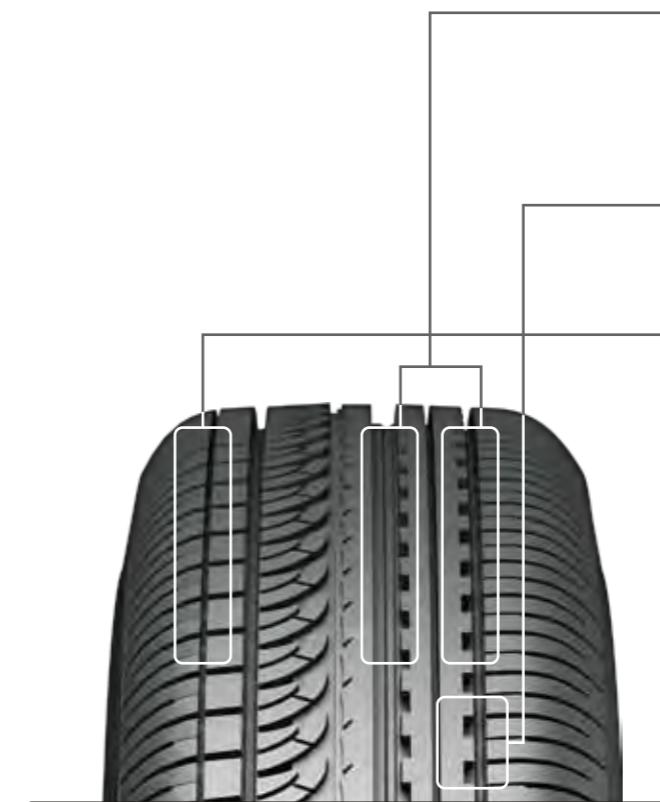

**Inside and outside pattern allocation adopts 50% v.s 50% width design.**

On the outside tread, the high-stiffness curved pattern increases the cornering force and enhances the steering ability. Two straight broad grooves and the sipe bars added in the middle groove accumulate the water for better drainage efficiency and driving safety in wet conditions.

On the inside tread, the evenly thin sipe design reduces the road impact and enhances driving comfort. Unique straight groove on the tread shoulder not only normalizes the stiffness and contact patch, but also prevents from irregular wear.

Unique silica formula increases the grip on wet ground and reduces rolling resistance.

In order to get the better drainage efficiency, two straight broad grooves are applied on the outside. To enhance the safety on the wet ground, the stream in the middle groove is used to accumulate the water with the assistance of fine sipe bar to divert the water for safer drive.

To increase cornering force on the outside, the shoulder high rigidity pattern to strengthen cornering force and enhance the steering ability.

Unique straight grooves on the shoulder gives the whole tread look more rigid and prevent it from irregular wear.

The evenly thin sipes reduce the road impact and enhance the comfort when driving.

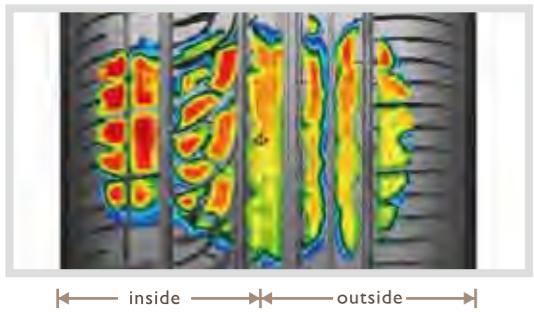

In order to get the best silent features, the tread pattern is using two-in-one and multi-pitch design.

# RX-615

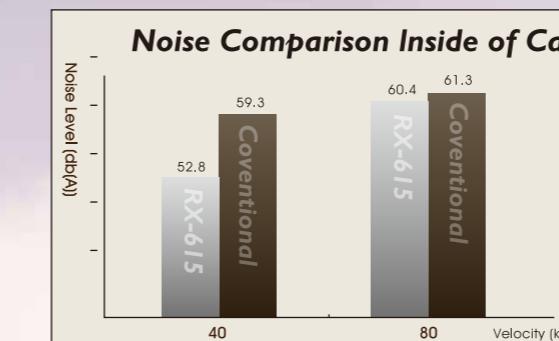

Four straight broad grooves enhance drainage efficiency and upgrade the safety on wet ground.

The sub-straight grooves on the shoulder reduce the rigidity and prevent uneven wear happens.

Multi sipes design reduces the rigidity of the tread and enhance the driving comfort.

The lateral groove design curbs the generation of pattern .

The pitch is designed with 5-pitch computer simulation to provide quiet and luxurious driving experience.

## Noise Comparison between RX-615 and Conventional tires.

The new generation low-noise tire uses computerized multi-pitch simulation technology as well as the multi-sipe design on the tread pattern to reduce and restrain noise generation. The sub-groove on the tread shoulders can reduce the pattern stiffness to prevent from irregular wear.

WR=WHITE RIBBON

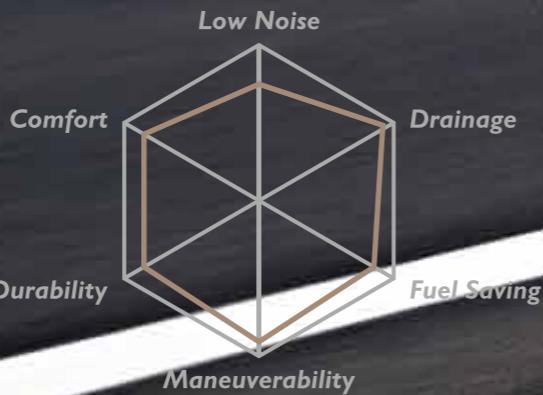

# XR-611

Four straight groove pattern enhances the drainage efficiency and the maneuverability on wet ground.

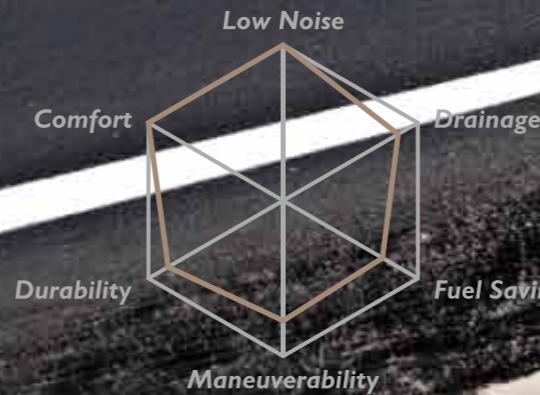

Special block pattern design enforces the maneuverability

The gradually broadened grooves expedite drainage efficiency.

Pitch pattern designed by computer-simulated calculation reduces the noise generation.

COMFORT

N-605

Four Straight grooves ensure driving safety on wet roads.

Small sipes allocated with large block reduce the impact caused from the road, promote the comforts and reduce tire noise generation created from tread pattern.

Multi pitches pattern designed by computer simulation reduces tire noise generation.

Special tread compound design increases tire mileage to reach economical and valuable tire.

# SP-7

# SP-5

Two straight broad grooves & arc sub-grooves enhance drainage efficiency and prevent from hydroplaning.

Noise prevention bar on the shoulder groove reduces the pattern noise.

The blocks with sipes make the block stiffness feasible, and improve the premature tire wear and riding comfort.

Noise prevention bar reduces the noise generated by the pattern.

Two center wide circumferential grooves efficiently direct water away and enhance superior wet handling.

Added sipes in the block pattern normalize the tire surface hardness, thus increasing comfort and buffering the noise generated from the road.

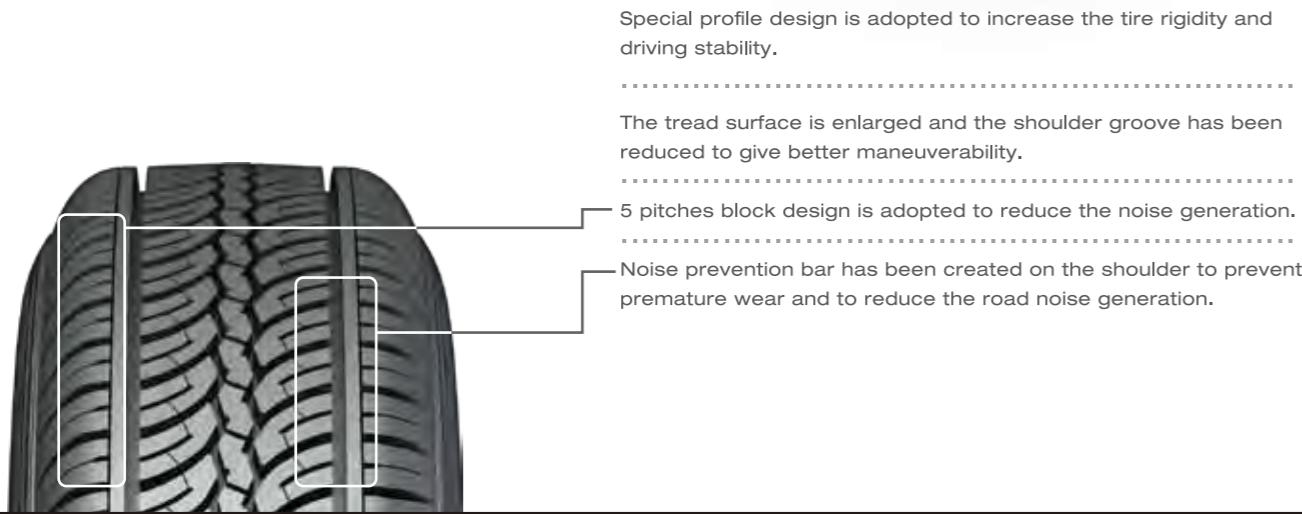

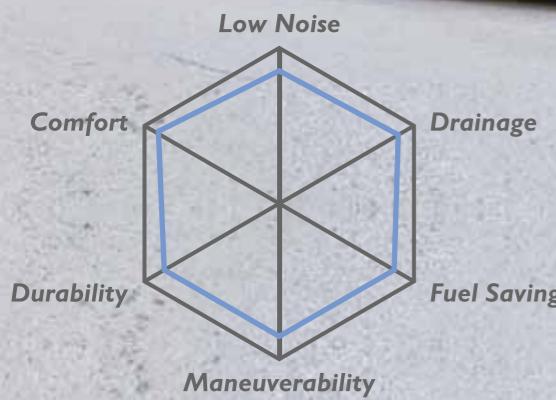

Designed by Nankang's NSS (Noise Simulation System), the pattern is arranged to lower the noise between the pattern blocks.

Interlocking shoulder block design can grip and exclude scree and clods to increase maneuverability, and allow the car to be navigated freely on rugged roads.

Hook-shaped blocks can increase gripping thrust on scree and clods.

The blocks extended to tread shoulders provide extra traction between blocks and scree while the tread could not touch roads.

The prominent bar on the bottom of the grooves can prevent stones lodged in the grooves. Lodged stones will be expelled by the flexible moves caused between the prominent bar and the groove wall.

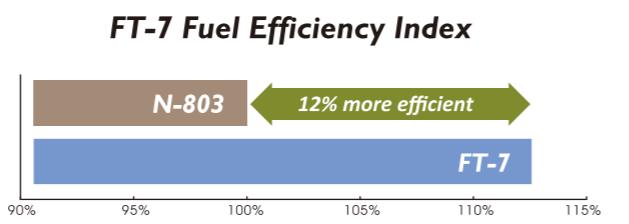

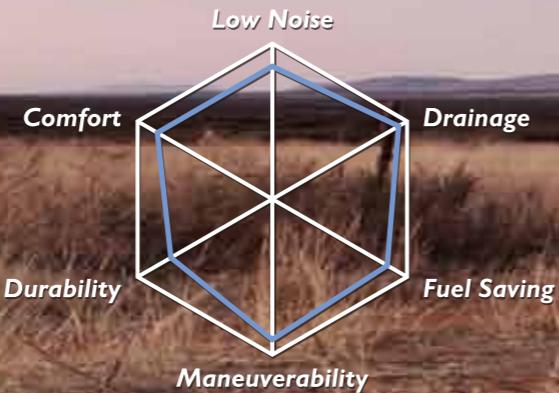

Z-shaped zigzag grooves can mill the clods and adjust to all kinds of rugged roads.

Special profile increases the tire rigidity and driving stability.

The tread surface is broadened and the shoulder groove is reduced to give better maneuverability.

Zigzag main groove design is adopted for mud road condition.

Gradual widening sub-groove pattern is aimed to divert the gravel out more efficiently when cornering.

The noise prevention bar on the shoulder prevents premature wear and to reduce the road noise generation.

Special rigid shoulder and sidewall design absorbs the shake from rugged roads and reduces car bumping.

Stud holes design suits to all terrain. Studs can be applied to enhance the maneuverability and braking if necessary.

The computer-simulated blocks perform excellently on all kinds of road conditions.

White letter sidewall shows unique and strong characteristics.

# N-889

Special rigid shoulder and sidewall design absorbs the shake from rugged roads and reduces car bumping.

Stud holes design suits to all terrain. Studs can be applied to enhance the maneuverability and braking if necessary.

The computer-simulated blocks perform excellently on all kinds of road conditions.

White letter sidewall shows unique and strong characteristics.

# CW-20

To make driving comfortable, zigzag grooves decrease pattern noise, and more comfortable drive.

CW-25 is a NANKANG new generation commercial tire which emphasizes on enduring and wear performance ability.

Special tread compound increases its wear performance ability.

The excellent pattern design enhances rigidity to provide the best loading capacity.

Optimal lateral groove reduces the noise generated from air consonance and increases riding comfort.

Four-straight grooves ensure driving safety on wet ground.

Shoulder rigidity enhancement prevents from irregularly wearing and is suitable for long distance driving.

Sipes on the bottom of shoulder grooves keep tread soft and riding comfort in terminal wearing stage.

# LIGHT TRUCK & BUS

## NR-066

The arrangement of the tread pattern pitches, which is designed through computer simulation, reduce the generation of noise.

The sidewall horizontal ratio is enlarged to ensure endurance, safety and smooth driving.

The deeper tread groove ensures great gripping ability and reduces the noise at the later stage of tire use.

## Durability test

## • Recommend position

## • Recommend position

The full-axis tire that is suitable for expressway and general pavement.

With design of four straight grooves that can strengthen the draining function for tire and further improve the maneuverability on wet field.

Reinforced structure design that can enhance the durability and safety of tire, as well as provide excellent maneuverability.

With design of multi-angle furrow bank together with gravel-block strip at bottom of the flute that can effectively minimize the probability of gravels being stuck in, then further protect the tread and lengthen the service life of tire, as well as reduce the maintenance cost.

The drive axle tire that is suitable for general pavement and unpaved road.

With design of interlaced pattern block at central part of tread and bulk pattern at the outside that can strengthen the draining function and provide traction, then further improve the performance when drive on well field and unpaved road.

Reinforced structure design that can enhance the durability and safety of tire, as well as provide excellent maneuverability.

The depth of horizontal groove at shoulder area was shallowed that can reinforce the rigidity at the medium and later stage of abrasion, then further lengthen the service life of tire and reduce the maintenance cost.

# Safety

## Choosing a tire and replacement

Follow the original vehicle manufacturer OE rim specifications and discuss with a professional tire shop before making a replacement.  
All tires used must be of identical specifications and tread pattern.  
Do not mix different models, structures, or sizes of tires, to avoid accidents.  
Tires are marked with a direction on the sidewall and are to be installed in that direction.

## Correct use and daily inspection

**Tire Pressure**  
Measure the tire pressure when the tire is cold and inflate to originally specified pressure.

**Tread Wear Indicator**  
Minimum tread depth is limited to 1.6mm.  
There are 6 on the circumference of the tire marked "remaining tread"

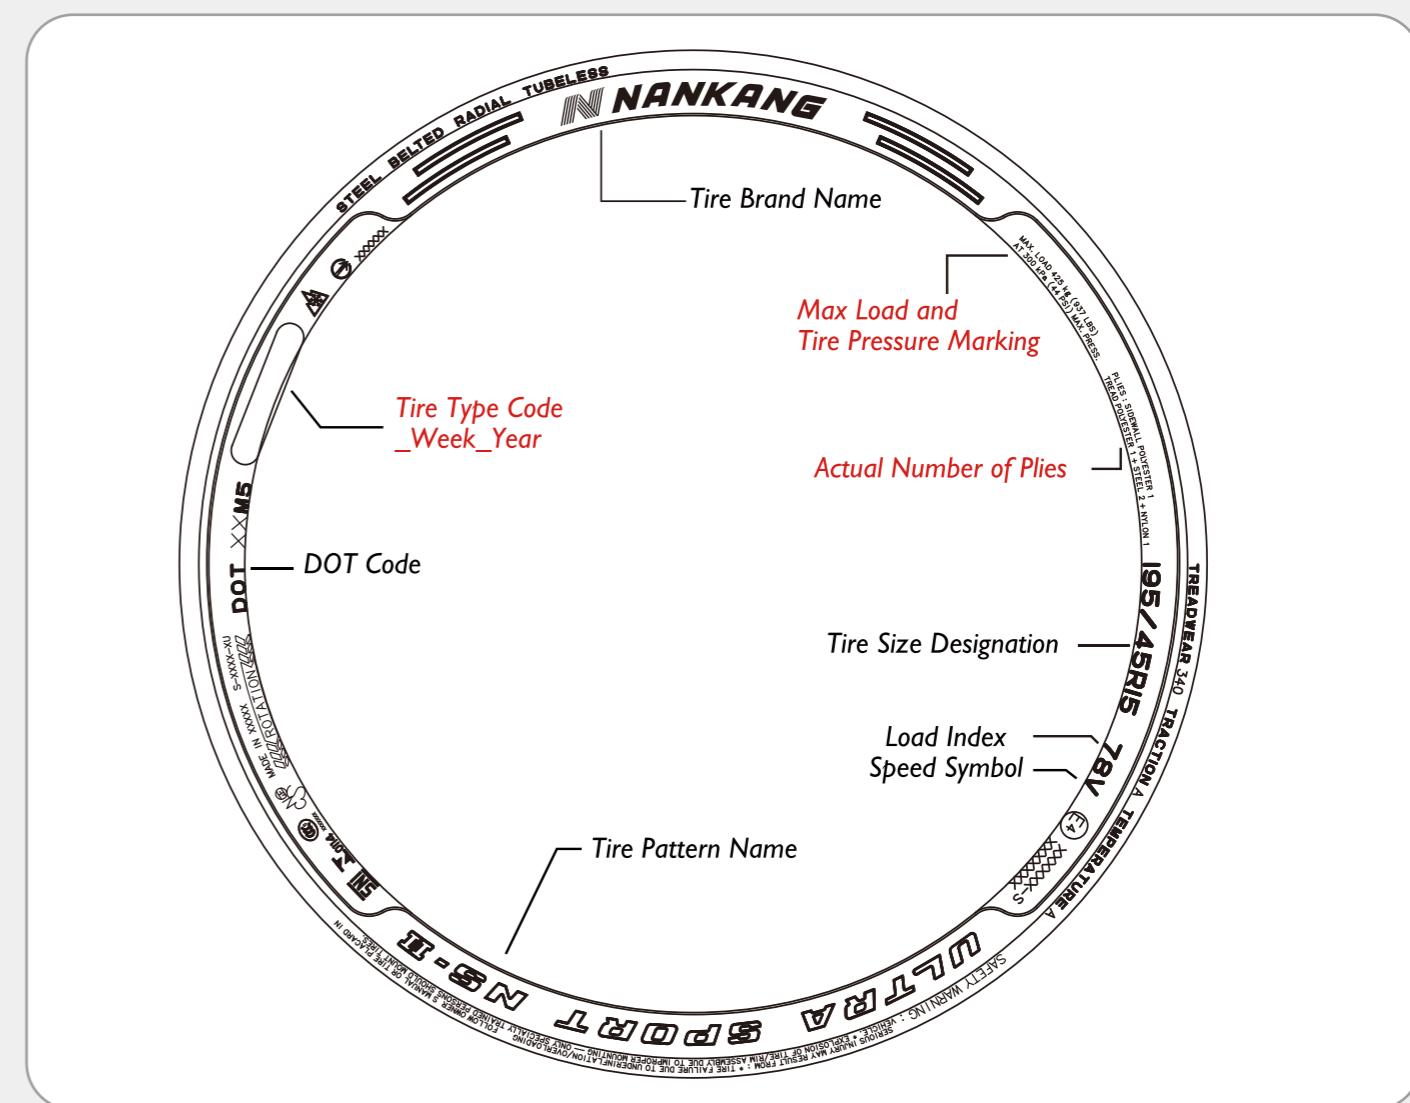

**Caution**  
Check the tire surface for cracks, pins, metal scraps, glass or anything that may puncture the tire. Also, check for pebbles stuck between the treads. If any of the above situations occur, please go to a professional tire shop for repair.  
Do not use a tire with damage through which the underlying fabric or steel belt is visible, to prevent accidents.  
Mounting a tire to rim should be following the instruction of direction.  
The tires should be rotated according to specifications.  
If the tire crown is abnormally worn (damage), please go to a professional tire shop for replacement.  
Avoid direct sunlight, rain, oil, and electric sparks in tire storage locations.

The tire is made of rubber and will deteriorate after a long period of use, and should be periodically inspected. Nankang doesn't guaranty tire whichever five years off from manufactured date the tires should be inspected regularly by the shop; tire over 10 years old must be replaced.

## Important Precautions for Drivers

Avoid grinding the sidewall against the curb and running over bumpy surfaces, to limit damage to the tires.  
Avoid sharp cornering, quick stops, and rapid acceleration, to prevent accidents from happening.  
Keep a safe driving distance and obey the speed limit.  
When you feel vibration from the vehicle or steering wheel, inspect the tires or return them to the factory for a checkup.

## Tire Sidewall Marking Descriptions

### United States Department of Transportation Safety Standards

United States Department of Transportation regulation "Federal Motor Vehicle Safety Standards", tire must be marked as follows:

#### Manufactured Date

#### Tire marked with DOT indicates

- Registered with U.S. DOT
- Passes certification of U.S. DOT regulated safety standards testing

#### Tire Pressure Marking

MAX LOAD( ) LBSAT ( ) PSI MAX. PRESSURE

(Example) When inflation pressure is 36PSI (max), the maximum load is 1135 LBS.

Note: The maximum tire load and inflation pressure for a cold tire.

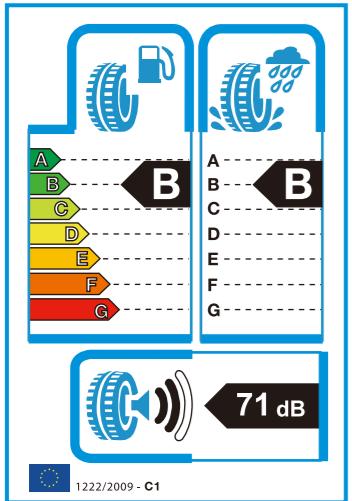

Note: During normal use, please follow the marked inflation pressure on the tire. Do not exceed the maximum pressure.

#### Actual number of plies

PLIES: SIDEWALL POLYESTER X

TRADE POLYESTER X+STEEL X+NYLON X

## NEW EUROPEAN TIRE LABEL

All new tires, produced after 1st of July 2012, and to be sold at point of sale in EU countries after 1st of November 2012, must follow EC NO 1222/2009 labeling criteria, and should be labeled with stickers to give the information.

The aim is to improve driving safety, fuel efficiency, and lower noise levels. This regulation allows consumer to make more informed choices when purchasing tires by considering these ranking.

### RRC (Rolling Resistance Coefficient)

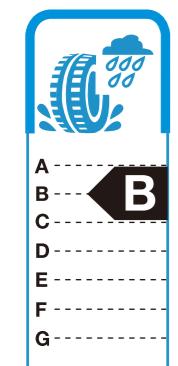

Lower rolling resistance contributes to fuel saving and less carbon dioxide emission.

Grade A: most efficiency

Grade G: least efficiency

Choosing grade A indicates the tire consume less fuel and carbon dioxide emission.

Effect may vary among vehicles and driving conditions, but the difference between a G and an A class for a complete set of tires could reduce fuel consumption by up to 7.5 % and even more in case of trucks.

### Wet grip

Wet grip is an important indication for tire performance of wet road braking distance.

Grade A: the shortest distance

Grade G: the longest distance

Choosing grade A indicates the tire could be shorter 30% braking distance than grade G.

Effect may vary among vehicles and driving conditions, but in the case of full braking, the difference between a G and an A class for a set of four identical tires could be up to 30% shorter braking distance (e.g. for a typical passenger car driving at 80 km/h speed this could be up to 18m shorter braking distance)

### External rolling noise classes

The external rolling noise is measured and declared in decibels (dB), and indicated in three levels. More black bars mean that the tires create more road noise.
